Make a task easy to repeat

Write a short set of instructions someone else could follow. This is your standard operating procedure (SOP).

A task I do often:

The result I want:

When do you start? For example: when a customer asks for a quote.

1 First → 2 Next → 3 Then

Who does it?

What do they do?

What do they need?

What do they pass on?

Check the result

How will you know it was done correctly?

If something goes wrong

When should you stop and ask for help?

Hand it over

Who checks it, and who gets the result?

Use short phrases. Leave unused steps blank. Type and save a copy, or print and write by hand.
